

Invention's Title: TOOTHBRUSH WITH A TOOTHPASTE CONTAINER AND A DOSING TRIGGER

Short description:

Toothbrush presenting a toothpaste container within a hollow handle and a dosing trigger to spread the toothpaste into the bristles.

This toothbrush is destined mainly for people who use this kind of utensil outside of home.

Its most evident advantage is that it can be carried easily and safely. Among other advantages one may list that it is disposable, therefore, fabricated with inexpensive materials and techniques, allowing the user to buy it in any place and anytime when having it forgotten at home or in case of running out of toothpaste. The dosing trigger allows precise application of toothpaste in terms of spreading it in the right place into the bristles, and with the right amount or quantity, thus preventing the excessive use of toothpaste. Moreover, the toothpaste will always be fresh achieved this by the closing of the second valve. Finally, the retractable option enhances the transportability of this toothbrush.
